

Peaceful Nuclear Cooperation

U.S. Support for NPT Article IV

UNITED STATES & PANAMA

Through the International Atomic Energy Agency (IAEA), the United States contributes to the work of many countries using nuclear materials and technology for peaceful purposes. In recent years, U.S. support has focused on achieving tangible and lasting benefits in fields that are vital to human development, including agriculture, human health, water resource management, and human resource development. Since 2000, the IAEA has approved and funded \$3,341,706, including \$268,085 in 2013, under its Technical Cooperation (TC) program for projects in Panama.

In addition to the United States' longstanding support for the IAEA's activities to promote peaceful nuclear applications, at the 2010 NPT Review Conference, the United States announced a \$100 million USD effort to expand this support over the next five years. The United States has pledged \$50 million towards the IAEA's Peaceful Uses Initiative (PUI), focusing on human health, food security, water resource management, and nuclear power infrastructure development.

The United States views its support for peaceful uses of nuclear energy, to which all NPT Parties are entitled, as a critical part of its broader effort to strengthen the IAEA and the global nuclear nonproliferation regime. The U.S. has already designated over \$22 million for IAEA projects benefitting over 120 countries, including Panama, for which funding was previously unavailable. The United States is working with partners to reach the \$100 million goal, and welcomes Japan, the Republic of Korea, New Zealand, the Czech Republic, Hungary, Sweden, Australia, France, Indonesia, Brazil, Italy, the UK and Kazakhstan who have announced their own commitments to the PUI of over \$12 million.

AGRICULTURE

Food systems in developing countries are not always as developed as in the industrialized world, and when the quality and safety of food supplies suffers, the people in those countries are

therefore exposed to a wide range of potential food quality and safety risks. Additionally, for most developing countries, agriculture lies at the center of their economies and food exports are a major source of foreign exchange and income generation, but access to food export markets depends on their capacity to meet the regulatory requirements of importing countries. Panama is therefore participating in a regional TC project supported by the United States to ensure food safety, promote good agricultural and production practices, and enhance food exports by using nuclear techniques to monitor chemical residues and contaminants in food products.

Panama is also participating in a project, coordinated by the IAEA's Department of Nuclear Sciences and Applications and supported by the United States, to implement capacity building activities to improve food safety and quality through nuclear technology and networking. The project involves workshops, human resource training, and technology transfers, and aims to establish functional networks, raise awareness of food safety and conduct food safety gap analysis in selected countries.

HUMAN HEALTH

Latin America faces a double burden today: on the one hand, under-nutrition, and on the other hand, obesity. Panama is therefore participating in a regional TC project supported by the United States to improve the capacity of key institutions to use nuclear techniques to address each extreme of malnutrition. These techniques include isotopic dilution with deuterium to assess body composition, as well as carbon-13 to measure fat and glucose oxidation. The project will improve the quality of programs in the region; contribute tools for the diagnosis and evaluation of micronutrient deficiencies, obesity and

obesity-related chronic diseases; as well as allow the establishment of data for those programs, which will help in the identification of vulnerable groups, planning, and the prioritization of actions to be applied.

NUCLEAR SAFETY

Panama is currently participating in a regional TC project supported by the United States to improve the operational national regulatory infrastructure for safety and control of radiation sources to ensure the protection of people and the environment against the adverse effects of ionizing radiation. The project will harmonize and streamline participating countries' national capabilities for regulatory control in compliance with international requirements and establish or develop a comprehensive national system for preparedness and response to radiological emergencies.

Human resource development is critical for Member States to be able to implement and sustain nuclear security, so Panama is also participating in a regional TC project supported by the United States to implement the component of the IAEA Nuclear Security Plan 2010-2013 which focuses on institutional capacity building, human resource development and educational programs. Strengthening nuclear security human resource development will contribute to

sustained effective nuclear security worldwide.

HUMAN RESOURCES

To contribute to Member States' manpower development, the IAEA awards individual fellowships and organizes group training courses. Every year, numerous fellows and training course participants travel to the United States for training in various peaceful uses of nuclear technology and return to their home country to apply the lessons learned.

Since 2000, the United States has hosted training courses that included Panamanian participants in the fields of nuclear security and isotope techniques for river basin management. Training was also provided through the IAEA Fellowship Program to six Panamanians, five of which were supported by the United States, in fields including molecular biology techniques and immunodiagnostics, marine environment and coastal zone management, radiation protection, and medical exposure control.

Additionally, since 2000, 12 U.S. experts have traveled to Panama to collaborate through various IAEA Technical Cooperation projects. Examples of some topics include quality evaluations, fruit exports, and fruit fly surveillance and quarantine.
